Risk Management Framework

Risk Management framework – A reminder from the previous lesson

Risk Management framework – A reminder from the previous lesson

Risks are addressed through sophisticated risk management systems, internal control system and strong corporate governance.

Risk management systems include processes established to ensure that all material risks and associated risk concentrations are:

- ◆ Identified;
- ◆ Measured;
- ◆ Limited;
- ◆ Controlled;
- ◆ Mitigated;
- ◆ Reported on a timely and comprehensive basis.

Internal control system is a set of rules and controls governing the bank's organizational and operational structure, including reporting processes, and functions for:

- ◆ Risk management;
- ◆ Compliance;
- ◆ Internal audit.

Corporate governance is a set of relationships between a company's management, its board, its shareholders and other stakeholders which provides the structure through which the objectives of the company are set, and the means of attaining those objectives and monitoring performance. It helps define the way authority and responsibility are allocated and how corporate decisions are made.

Risk Management framework – Parts

Governance and structure

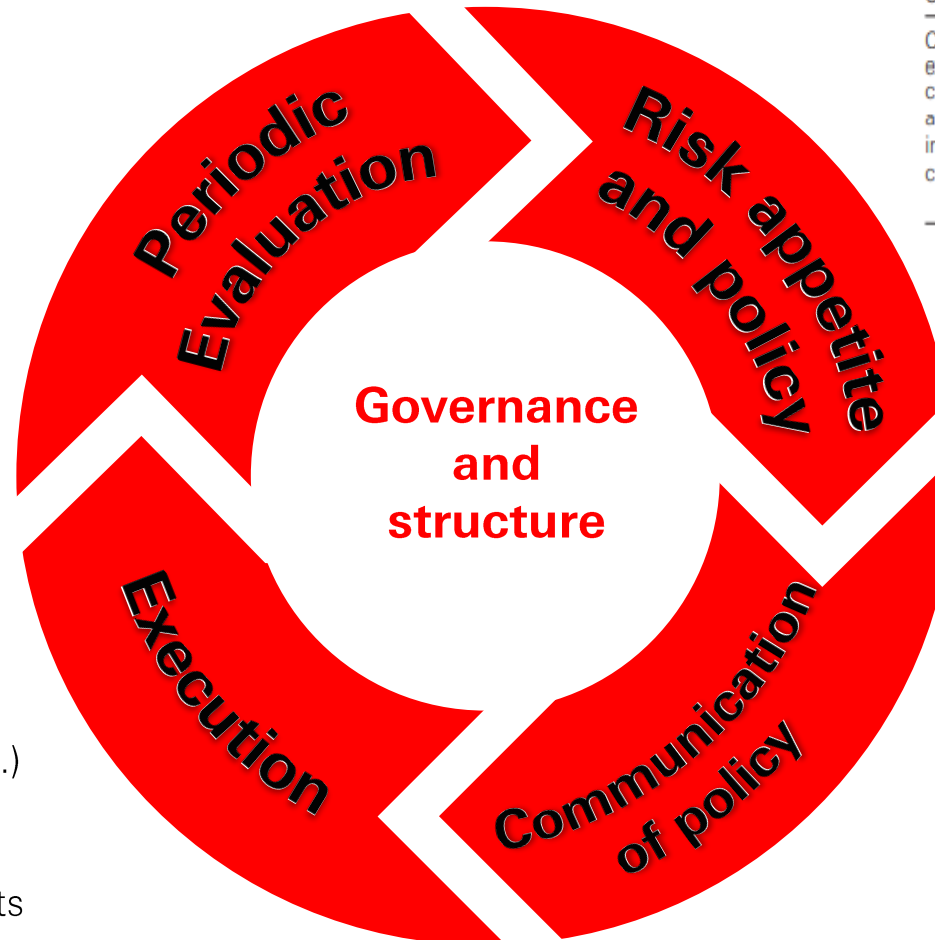

- ◆ Defines overall risk culture in the organization
- ◆ Sets the tone as how the bank implements and executes the Risk Management strategy

Risk Management framework – Parts

Two main factors:

- ◆ **External:** regulation, environment, macroeconomic and geopolitical situation
- ◆ **Internal:** focus and Strategy Plan

Put in practice to achieve metrics:

- ◆ Measures (all PDs, max exposure,...)
- ◆ Reporting system
- ◆ Thresholds to monitor and flag alerts
- ◆ Clear actions if alert is flagged

Key risk appetite metrics

| Component | Measure | Risk appetite | 2021 |
|--|---|---------------|----------------|
| Capital | CET1 ratio – end point basis | ≥13.0% | 15.8% |
| Change in expected credit losses and other credit impairment charges | Change in expected credit losses and other credit impairment charges as a % of advances: (WPB) | ≤0.50% | (0.06)% |
| Change in expected credit losses and other credit impairment charges | Change in expected credit losses and other credit impairment charges as a % of advances: wholesale (GBM, CMB) | ≤0.45% | (0.10)% |

Source or Key appetite metrics:

HSBC 2018 annual report

Risk Management framework – Features of a particular risk management

◆ **Identify and assess key exposures:**

- Risk Assessment, Event Management, Key Risk Indicator;
- Evaluate the risk controls: identify inherent risk and measure the residual risk after implementation of controls;

◆ **Establish clear personal accountabilities, roles and responsibilities:**

- Streamlines the risk management process;
- Allows risk managers to incorporate accountability into the work culture of the organization;

◆ **Enable an efficient allocation of risk capital:**

- with a streamlined risk management process, efficient risk capital allocation and utilization can be ensured;

◆ **Establish consistent and timely risk management information and reporting capabilities:**

- role-based dashboards, control diagrams and scorecards help to bring high-risk areas into focus;

◆ **Ensure a continuous risk management learning:**

- Helps to achieve more informed and proactive decision-making and align framework to the supported businesses;
- business units should share their experience and best risk management practices.

Risk Management framework – Example: HSBC Risk Management framework

Key components of our risk management framework

| HSBC values and risk culture | | |
|------------------------------|---|--|
| Risk governance | Non-executive risk governance | The Board approves the Group's risk appetite, plans and performance targets. It sets the 'tone from the top' and is advised by the Group Risk Committee (see page 254). |
| | Executive risk governance | Our executive risk governance structure is responsible for the enterprise-wide management of all risks, including key policies and frameworks for the management of risk within the Group (see pages 138 and 145). |
| Roles and responsibilities | Three lines of defence model | Our 'three lines of defence' model defines roles and responsibilities for risk management. An independent Group Risk and Compliance function helps ensure the necessary balance in risk/return decisions (see page 138). |
| Processes and tools | Risk appetite | The Group has processes in place to identify, assess, monitor, manage and report risks to help ensure we remain within our risk appetite. |
| | Enterprise-wide risk management tools | |
| | Active risk management: identification/assessment, monitoring, management and reporting | |
| Internal controls | Policies and procedures | Policies and procedures define the minimum requirements for the controls required to manage our risks. |
| | Control activities | Operational and resilience risk management defines minimum standards and processes for managing operational risks and internal controls. |
| | Systems and infrastructure | The Group has systems and processes that support the identification, capture and exchange of information to support risk management activities. |

Risk Management framework – Main risks associated to banking (non-exhaustive)

Risk Management framework – Regulatory Capital

Risk-weighted assets

RWAs by global business

| | WPB \$bn | CMB ¹ \$bn | GBM ¹ \$bn | Corporate Centre \$bn | Total RWAs \$bn |
|--------------------------|--------------|--------------------------|--------------------------|-----------------------------|-----------------------|
| Credit risk | 155.3 | 319.1 | 131.5 | 78.0 | 683.9 |
| Counterparty credit risk | 1.9 | 1.5 | 32.0 | 0.1 | 35.5 |
| Market risk | 1.3 | 1.0 | 22.2 | 13.0 | 37.5 |
| Operational risk | 34.4 | 32.9 | 32.8 | (2.9) | 97.2 |
| At 31 Dec 2023 | 192.9 | 354.5 | 218.5 | 88.2 | 854.1 |
| At 31 Dec 2022 | 182.9 | 342.4 | 225.9 | 88.5 | 839.7 |

¹ In the first quarter of 2023, following an internal review to assess which global businesses were best suited to serve our customers' respective needs, a portfolio of our customers within our entities in Latin America was transferred from GBM to CMB for reporting purposes. Comparative data have been re-presented accordingly.

WPB = Wealth Management and Private Banking
 CMB = Commercial and Merchant Banking
 GBM = Global Banking and Markets

Types of risk

Types of Risk – Market Risk

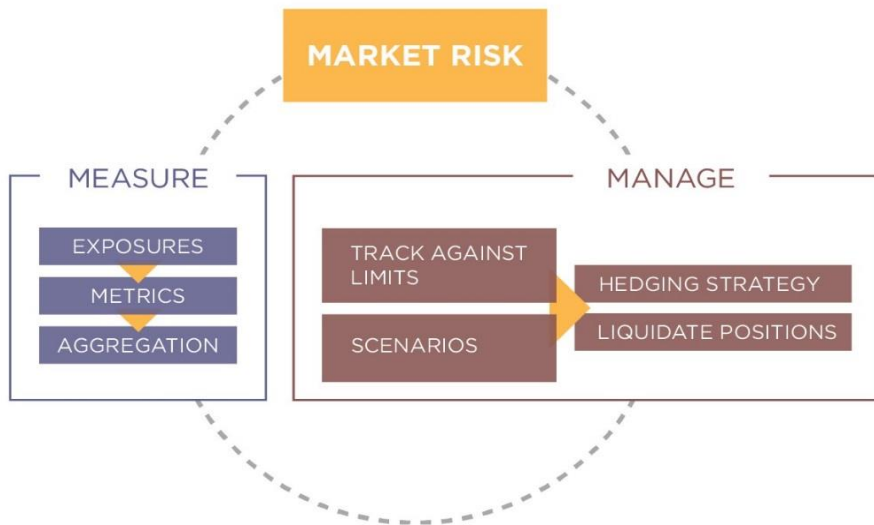

Reminder from the previous lesson:

Examples of risks included in market risk:

- ◆ Interest rate;
- ◆ Equity;
- ◆ Foreign exchange (FX);
- ◆ Commodities.

Some important market risk management terminology:

- ◆ Standardized approach (SA);
- ◆ Internal models approach (IMA);
- ◆ Value at Risk (VaR);
- ◆ Expected Shortfall (ES);
- ◆ Monte-Carlo simulation;
- ◆ Counterparty Credit Risk (CCR);
- ◆ X-Value Adjustments (XVA).

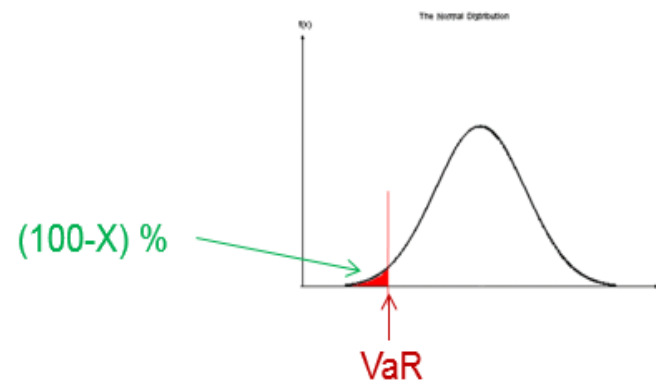

Types of Risk – Market Risk

- ◆ Main measure, **Value at Risk (VaR)**: estimation of the potential loss at a certain confidence level (X) and time horizon (e.g. N days)
- ◆ **Example**: if the VaR at 99% and 10 days is 10.000 PLN, this means that we are 99% sure that we will not lose more than 10.000 PLN in the next 10 days

When $N = 10$ and $X = 99$,

VaR is the **1** percentile of the distribution of change in portfolio value over the next **10** days.

Types of Risk – Market Risk

VaR has a number of **advantages**:

- ◆ It captures an important aspect of risk with a single number;
- ◆ It is easy to understand: the 1% VaR is the worst outcome of the 99% best outcomes
- ◆ It is easy to calculate

VaR has a number of **disadvantages**:

- ◆ It actually doesn't capture the key aspect of risk: what to expect when things go wrong
- ◆ It is actually extremely misleading: the 1% VaR is the *best* possible outcome of the 1% worst cases
- ◆ It is actually not a risk measure at all (it is not a coherent risk measure)

There are **three main approaches to calculate VaR**:

- ◆ Parametric: the P&L is estimated by assuming that the portfolio/underlying follows a certain distribution;
- ◆ Historical: the P&L is estimated using risk factors' recent history;
- ◆ Monte Carlo: the risk factors are simulated and then the P&L is estimated.

Types of Risk – Market Risk

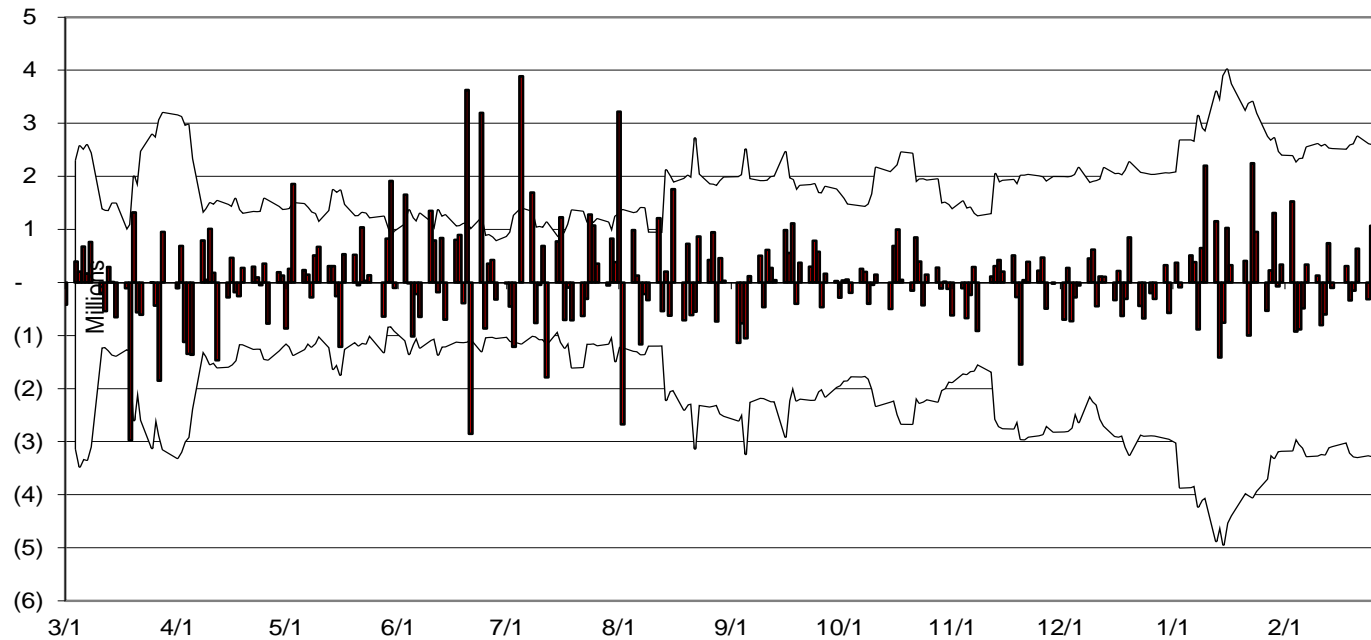

The VaR cannot cover all risk factors, it needs to be supplemented. Examples:

- ◆ **Stressed VaR:** assuming historical approach, VaR only uses the recent history of the relevant risk factors. Stressed VaR uses the history during the financial crisis;
- ◆ **Idiosyncratic Credit VaR:** many positions do not have proper market data; they must be valued using a proxy, which introduces further error in the calculation. This term estimates this error;
- ◆ **Incremental Risk Charge:** VaR does not take into account changes in credit quality of obligors (i.e. rating). This term estimates the effect of this risk factor.

Each term responds to a **regulatory requirement**

Types of Risk – Market Risk

Example of use: **VaR breaches**

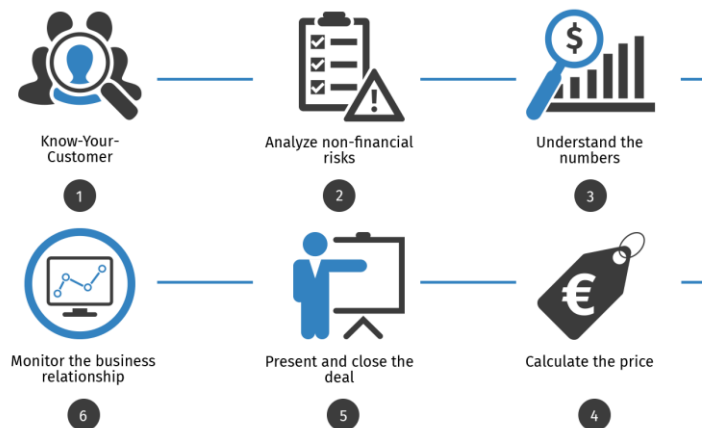

Levels for 250 observations at a 99% level

| Zone | K | $P(N \leq K)$ |
|-------|-----|---------------|
| Green | 4 | 89.22% |
| Amber | 5 | 95.88% |
| Red | 9 | 99.97% |
| Red | 10 | 99.99% |

Types of Risk – Credit Risk

Reminder from the previous lesson:

Some ways to mitigate credit risk:

- ◆ Risk-based pricing;
- ◆ Covenants;
- ◆ Credit insurance and credit derivatives;
- ◆ Guarantee from a third party;
- ◆ Tightening (e.g. reducing exposure amount or payment terms);
- ◆ Diversification;
- ◆ Collateral.

Some important credit risk management terminology:

- ◆ Standardized approach (SA);
- ◆ Internal Risk Based approach (IRB);
- ◆ Expected Losses (EL);
- ◆ Probability of Default (PD);
- ◆ Loss Given Default (LGD);
- ◆ Exposure at Default (EAD).

Types of Risk – Credit Risk

Two main blocks:

Retail: it involves typical day to day products

- ◆ Mortgages
- ◆ Credit cards
- ◆ Car or Student loans

And in the middle, the small & medium enterprises (SME), which have a bit of both

Wholesale: the focus is on big companies

- ◆ Project finance
- ◆ Working capital management
- ◆ Commercial real estate

Types of Risk – Credit Risk

Three main measures:

- ◆ **Default probability (PD)**: the probability of failing to honor the required payments over a particular time horizon;
- ◆ **Exposure at default (EAD)**: the total value a bank is exposed when an obligor defaults;
- ◆ **Loss given default (LGD)**: usually expressed as a percentage, the part that is expected not to be recovered in the event of default.
- ◆ These three quantities are then combined to express the **Expected Loss**: $EL = PD \cdot LGD \cdot EAD$

Individual contribution to **Risk Weighted Assets**:

- ◆ Similar to Market risk, contribution of each product is $RWA = K \cdot 12.5 \cdot EAD$
- ◆ A new term appeared. K depends on the PD and the LGD :

$$K = LGD \cdot \left[N \left(\sqrt{\frac{1}{1-R}} \cdot G(PD) + \sqrt{\frac{R}{1-R}} \cdot G(0.999) \right) - PD \right]$$

Types of Risk – Operational Risk

Reminder from the previous lesson:

Types of operational risk events:

- ◆ Internal fraud;
- ◆ External fraud;
- ◆ Employment practices and workplace safety;
- ◆ Clients, products and business practices;
- ◆ Damage to physical assets;
- ◆ Business disruption and system failures;
- ◆ Execution, delivery and process management.

Some important operational risk management terminology:

- ◆ Basic indicator approach (BIA);
- ◆ Standardized approach (SA);
- ◆ Advanced measurement approaches (AMA);
- ◆ The Business Indicator (BI);
- ◆ The Internal Loss Multiplier (ILM);
- ◆ Scenarios Analysis;
- ◆ Loss Distribution Approach (LDA).

Types of Risk – Operational Risk

| Type of risk | Example |
|--|--|
| Internal fraud | Hide positions intentionally to report less exposure |
| External fraud | Phishing mails to steal information |
| Employment practices and workplace safety | Electric shock because of a non-working plug |
| Clients, products and business practice | Accidental leak of customer personal data |
| Damage to physical assets | Non-operative site because of a blackout |
| Business disruption and systems failures | Communication infrastructure break due to accident |
| Execution, delivery and process management | Fat finger trade |

Types of Risk – Operational Risk

Example of use: **Expected Potential Loss**

It is easily understood with an example:

- ◆ **Frequency of an event:** throughout the previous year there were 204 attempts to steal money from case desks in its branches;
- ◆ **Severity of an event:** on average, the amount of stolen cash was 1.534 PLN;
- ◆ **Expected Potential Loss:** in this case, the monthly Expected Potential Loss from this particular type of operational risk event is $EPL=1.534 \cdot 204/12=26.078$ PLN.

Types of Risk – Model Risk

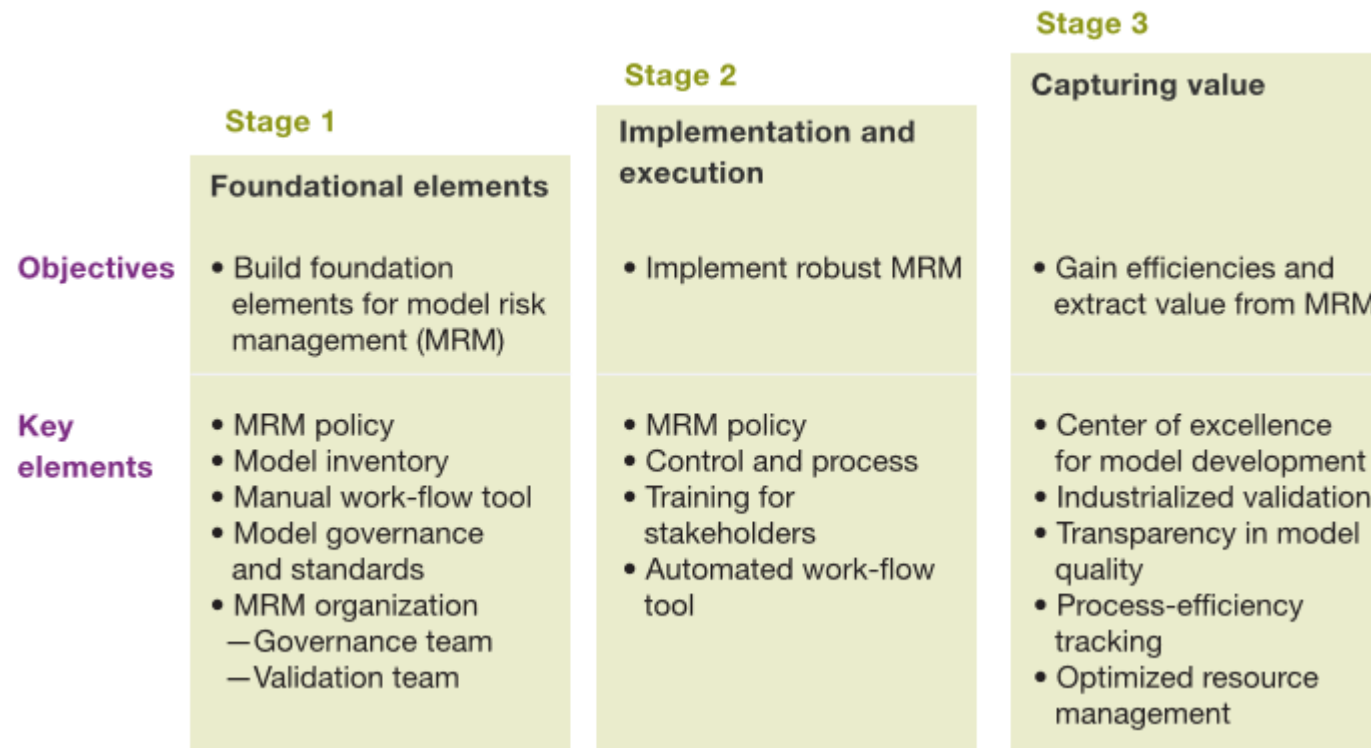

A large bank has a wide range of model types subject to governance and model risk management

| | | | | |
|--|--|---|---|---|
| MODELS USED FOR « REGULATORY, MANAGERIAL AND ACCOUNTING » PURPOSES | Market and Liquidity Risk Models <ul style="list-style-type: none"> • VaR (inc. Stressed VaR, IRC) • ALM & Liquidity Risk • Expected Shortfall | Credit & Counterparty Risk Models <ul style="list-style-type: none"> • PD, LGD and EAD • Risk rating models • Exposure and CVA • IFRS 9 Impairment | Operational Risk Models <ul style="list-style-type: none"> • Loss Distribution Approach Model • Integration Model | Compliance Models <ul style="list-style-type: none"> • Anti-Money Laundering (AML) • Anti Fraud • Trader surveillance |
| | Portfolio & Financial Risk Models <ul style="list-style-type: none"> • Capital forecasting • Stress testing • Econometric models | Decision Support Models <ul style="list-style-type: none"> • LOB models for customer targeting-marketing • Credit underwriting • Risk based collection models | Valuation & Pricing Models <ul style="list-style-type: none"> • Derivatives • Structured products • Risk based pricing tools/models | Finance Models <ul style="list-style-type: none"> • P&L Attribution • Cash flow /NPV/Ratio Analysis |
| MODELS USED FOR OTHER PURPOSES | Marketing Models <ul style="list-style-type: none"> • Marketing models • Client Targeting | Insurance Models <ul style="list-style-type: none"> • Actuarial models • Loss Forecasting • Reserving models | Investment Management <ul style="list-style-type: none"> • Trading • Security / Asset Pricing • Portfolio Allocation | Other Models <ul style="list-style-type: none"> • Corporate Finance Models (e.g. M&A, LBO, MBO) |

Source: Deloitte – Model Risk Management

Types of Risk – Model Risk

Setting a Model Risk Management Framework goes beyond a regulatory or administrative task:

Source: McKinsey – The evolution of Model Risk Management

Types of Risk – Model Risk

A common approach is the called **Three lines of defence**:

First Line of Defence

Model Development / Use

- ◆ Complete ownership of models
- ◆ Design and implementation
- ◆ Introduce infrastructure for effective implementation
- ◆ Post implementation and testing
- ◆ Ongoing monitoring of performance

Second Line of Defence

Model Validation / Control

- ◆ Independence from First Line of Defence
- ◆ No co-development of models. If there is a case, it must be explicitly documented to avoid partiality
- ◆ Analysis of all model areas (design, implementation, documentation,...)
- ◆ Stricter controls and documentation standards

Third Line of Defence

Internal Audit

- ◆ High level of independence from First and Second line of Defence.
- ◆ Assessment of both First and Second line, including how they interact during Model Validation
- ◆ Less focus on model content and more on processes and controls
- ◆ Conclusions directly reported to Senior Management and Board

Types of Risk – Other types of Risk

◆ **Liquidity risk:**

- From the Markets side, Liquidity risk arises when for a certain period of time a given financial instrument cannot be traded quickly enough in the market without impacting the market price;
- From the Credit side, Liquidity Risk is the risk that a business will have insufficient funds to meet its financial commitments in a timely manner

▪ **Climate Change**

◆ **Reputational risk:** risk of loss resulting from damages to a firm's reputation, due to adverse or potentially criminal event, even if the company is not found guilty. It could have many consequences:

- loss in revenue or in customers;
- increased operating, capital or regulatory costs;
- destruction of shareholder value.

So far, we have seen only the most important and relevant for Banking. There are many more!
